Density- and Refractometers

Reliable Results and Unsurpassed Reproducibility

One Click® operation

One click on the selected product or measurement method starts the measurement of density, refractive index or related values. The built-in temperature control brings the sample to the required temperature, the measurement is done automatically and the result displayed on the touch screen. Unlike older methods like pycnometer, aerometers and Abbe refractometers, the results are operator independent, thus highly reliable and reproducible.

Simplified quality control

For quality control, target value and limits can be defined for each product. The measurement result is then displayed in red if it is out of limits.

Multiparameter measurement

The modular concept allows to upgrade any single instrument to a complete multiparameter system measuring density, refractive index (or related values), pH (or conductivity), acidity and color.

Density- and Refractometers

Compact Size. Great Specs.

Density Compact

DM Density Meters

DM density meters determine the density and/or specific gravity of liquids quickly and accurately. The results are automatically converted into one or several pre- or user-defined units such as Brix, API degrees or alcohol concentrations etc. Automatic error detection, entire temperature range adjustments and built-in algorithms shorten measurement times required by up to 75% – DM and DX are doubtlessly the state-of-the-art pinnacle for digital density measurement.

Refractive Index Versatile

RM Refractometers

Brix, refractive index or concentrations of thin, highly volatile, dark or viscous liquids? The RM refractometers master the quality control of a wide variety of challenging samples from routine Brix measurements at 20 °C to refractive index determinations of bitumen at 100 °C. The measurements process can be completely automated with the added advantage of no more manual cleaning, no more contact with dangerous solvents and greater result reliability.

Cell Modules Combined

DX and RX Cell Modules

Density and refractive index are frequently determined in the same lab and, increasingly frequently, simultaneously. The upgrade of a DM density meter or an RM refractometer with a DX density cell module or an RX refractive index cell module is the most cost- and space-saving solution in such cases making it the perfect combination for any lab demanding fast and accurate results.

The DeltaRange™ density measuring cells are tailor made solutions for applications such as alcohol content determinations or the quality control of organic solvents. They offer five place accuracy in the range required for such measurements at a significantly lower price than full range five decimal place cells.

Automation

Highly Reliable with Minimal Effort

FillPal

The Robust Approach

The FillPal sampling pumps simplify the measurement of low viscous samples. These pumps can be used for all DM density meters and RM refractometers and are suitable for all applications where the samples to be measured are of a similar nature and no intermediate complete rinsing and drying of the measuring cell is required. FillPal is available in two versions: FillPal Food for water based products and FillPal Chem for aggressive samples including most acids, bases and organic solvents.

SC1

One Click®
Measurements

The SC1 is the best guarantee for a fast payback of your measuring system as it automates the determination of the density and/or refractive index and additional parameters (color, pH and/or conductivity) of individual samples. Sampling, rinsing and drying cycles are also run automatically. With the SC1, measurements are a matter of one single click or even no click at all when working with a barcode scanner or an ErgoSens.

SC30

Maximum Performance

The SC30 is a sample changer with 30 positions. It can not only automate the sampling, measurement, rinsing and drying of sample series but, equipped with a ScanStraight option, it is even capable of scanning barcode stickers on the sample vials automatically.

SC1H and SC30H

Density determinations of samples which are solid at ambient temperature

The SC automation units are available as heated versions suitable for performing density measurements of samples which are solid at ambient temperature such as paraffins, vaseline, edible fats, etc. The SC1H and the SC30H can handle samples with a melting point of up to 60 °C.

DryPal

Accurate Adjustments

Prior to air adjustments, the density measuring cell needs to be dried completely. The DryPal carries out this task effectively. This air pump is only required for density meters which are used without SC1 or SC30 automation units.

¹⁾ Made of borosilicate glass. The 20 mL vials are also available in polypropylene. The vials can be closed and are opened by the SC immediately before the measurement starts. Different vial sizes can be used without having to adjust the sampling mechanism.

Valuable Options

Custom Tailored Performance

Multi-parameter Measurements

Enhanced Productivity

Density, refractive index (or related values), pH (or conductivity), acidity and color can be measured and analyzed in one go.

Advanced Barcode Features

Convenient Sample Data Input

LiquiPhysics Excellence is not only able to read barcodes; it can also accurately interpret their information. With Smart Codes containing information about the type of product to be measured, the operator simply scans in the barcodes to start the measurements. No additional button to click.

LiquiPhysics Excellence is even capable of scanning barcodes automatically. The SC30 sample changers can be easily equipped with ScanStraight, a built-in barcode reader.

Plug and Play Benefits

Features Tailored To Your Needs

LiquiPhysics systems can easily be upgraded to fulfill specific requirements. The LogStraight finger print reader greatly simplifies the log-in procedure at the instrument with no user names or passwords to enter. With ErogSens, there is no need to touch the instrument to start the measurements. AtmoSens ensures highly accurate 5 place density adjustments. LevelSens guarantees greater safety when working with automation units and makes sure that the waste container never becomes overfilled.

LabX Laboratory Software

Make the most of LiquiPhysics

LabX is a new concept for laboratory software (see pages 18–21). In addition to data acquisition, analysis and archiving, LabX offers SOP user guidance, manages products, methods, users and instruments. It connects density meters, refractometers, melting point instruments and balances. Connection to ERP or SAP allows full integration in the company IT world.

Traceable Standards Improved Data Security

The combined liquid standard reference materials from METTLER TOLEDO facilitate reliable performance verification. They are certified for both density value and refractive index at three different temperatures (15, 20 and 25 °C). Combined measuring systems can be verified in one step. All the information contained in the certificates is coded in a barcode with no need to input data manually when performing a system performance test or calibration.

| Standard Reference Material | Density [g/cm ³] at 20 °C ¹⁾ | Refractive Index at 20 °C ²⁾ | Part no. |
|-----------------------------|---|---|----------|
| Water | 0.998.. | 1.333.. | 51338010 |
| Dodecane | 0.749.. | 1.422.. | 51338012 |
| 2,4-dichlorotoluene | 1.250.. | 1.546.. | 51338013 |
| 1-bromonaphthalene | 1.481.. | 1.658.. | 51338014 |

¹⁾ Uncertainty: 0.00003 g/cm³

²⁾ Uncertainty: 0.00002

Typical values: May change from batch to batch without prior notice

Qualification Services For Regulatory Compliance

Professionally executed installation and qualification (IQ/OQ) including documentation is offered by METTLER TOLEDO for LiquiPhysics™ Excellence instruments.

| Service | Product Families | Product Types | Order no. |
|---|---|----------------------------------|-----------|
| EQPac Equipment Qualification Package | LiquiPhysics™ Excellence Density Meters | DM40/DM45/DM50 DX40/DX45/DX50 | 51710870 |

Compact Solutions For any Environment

DA-100M

Thermostat Included

The DA-100M density meter is a compact three-decimal place density meter. It is equipped with a solid state thermostat and an air pump to dry the measuring cell. The optional ASU-100 sampling pump greatly simplifies density determinations of low viscous samples.

Densito and Refracto

Best On-site
Performance

Densito 30PX, Refracto 30PX and Refracto 30GS offer all the features required for successful on-site density and refractive index measurements including: Automatic temperature compensation, direct display of the result in the desired unit, built-in clock for full GLP compliance and data output via infrared interface. Densito and Refracto come with practical carrying cases which contain everything necessary to carry out measurements.

Refracto 30GS

Gold and sapphire

The Refracto 30GS Refractometer features a very wide measuring range and a quick temperature response thanks to its special measuring cell equipped with a gold plated stage ring and a prism made of artificial sapphire.

Please refer to the dedicated brochures for more information about Densito and Refracto or visit
